

Mobile ADE

Telegram is becoming the control plane

for vibe coding.

IDE: code changes.

Telegram: loops run.

The interface kept evolving

I started with GPT-2 inside TabNine.

Then came GitHub Copilot with GPT-3, ChatGPT, Cursor, Composer, Claude Code, Codex, Hermes, cron jobs, and review agents.

I talk about harness engineering

Each layer solved one problem

Copilot solved autocomplete. ChatGPT solved conversation. Cursor solved editing inside the IDE. Composer solved multi-file changes. Agents solved execution.

I talk about harness engineering

But the laptop assumption stayed

Most AI coding tools still assume the human is sitting in front of a coding interface.

Even when the agent is already doing the work somewhere else.

IV

Telegram fixes my context too

Cursor and Codex are getting better at context for agents. Telegram gives me context as a human, on my phone, without reopening terminals, repos, branches, or random chats.

Shrey Shah

I talk about harness engineering

The structure is the trick

Folders become project areas. Groups become projects. Supergroups become workspaces. Topics become features, bugs, and experiments.

Threads become isolated context.

Shrey Shah

I talk about harness engineering

VI

Hermes becomes the orchestrator

Hermes creates loops, runs cron jobs, routes work to agents, learns from feedback, and escalates only when needed.
Telegram becomes the mobile control plane.

Shrey Shah

I talk about harness engineering

VII

The system keeps the work moving

Hermes creates the loop. Cron keeps it alive. Poly agents coordinate.
Codex, Claude Code, Cursor, and other agents execute.
Review agents inspect the output.

Shrey Shah

I talk about harness engineering

The new skill

The skill is not just prompting better.

It is removing yourself from the loop without losing control: goals, context boundaries, review paths, escalation rules, and memory.

Shrey Shah

I talk about harness engineering

The harness is the product

The best setup is the harness

The best AI coding setup is not the smartest
single agent.

It is the system around the agents.

Save this framework
